 DRIVILOGIX

# SmartWorld DriviLogix

DriviLogix is the driver mobile application built by ISB Global, branded part of the SmartWorld application suite built on the OutSystems low code platform.

DriviLogix has an easy to understand interface which can be tailored to meet the needs of the team and add any additional workflow, logic or data capture function, depending on what is required in the process.

DriviLogix is designed to help the driver work through and complete the tasks associated with their daily process. Collecting and transporting waste materials in different jobs and routes to get to recycling and disposal points.

Legislative tasks like vehicle checks, mileage recording, routes and job management, add notes, capture signature, use the camera on the device to take photographs of any variance to job workflow, raise an alarm, use map directions, take a break and complete the shift.

RoutiLogix and DriviLogix work in conjunction. A range of configurations can take place in RoutiLogix to determine the driver's workflow, their tasks, activities and available functions.

Determining how the driver interacts with the software and what and how they need to perform depending on the type of collection job. RoutiLogix acts as the control panel and the command centre for what happens in DriviLogix, ensuring that the team carry out their instructions correctly.

Governed and controlled by the master data source of SAP Waste & Recycling One, the SmartWorld DriviLogix app is built on the OutSystems platform it works on any device and any operating system. Integrating to additional onboard equipment like a vehicle management system or onboard weighing. There is no need for additional tracking software, as the device itself can be tracked. Functions, software and hardware on the device can also be utilised like the operating system, storage and camera.
